

## Renovation Update 30 July 2010

Dear TLFCP Member,

Since our last update, the entire Glass Block steel structure has been completed and the concrete floors have been put in. The swimming pools have been retrofitted and completely retiled, making them look spanking new again!

The newly renovated pools will provide a unique swimming experience. The traditional system of maintaining the pool water by a cocktail of many chemicals is now history, thanks to aerospace technology. The pools will be treated by a system from NASA used for the astronauts drinking water and a system developed for European Aerospace brought in by The Water Consultant Group Pte Ltd.

You will swim in water that is as nature intended. The only additional help to nature in this artificial environment will be the absolute minimum allowed mandatory free chlorine.

This will be controlled to inhibit the smell or the health problems associated with chlorine. You can swim in water that is healthy with none of the side effects associated with conventional chemical pool treatments, such as harmful chloramines (the swimming pool smell) documented to be connected to asthma, allergies and cancer.

We expect the Club to be fully open in the last quarter of the year, barring any unforeseen circumstances. Do look out for our next progress update.

Best wishes,

The Management
